New Course Request  

Indiana University  
South Bend Campus

Check Appropriate Boxes:  
- Undergraduate credit [X]  
- Graduate credit [ ]  
- Professional credit [ ]

1. School/Division: Liberal Arts and Sciences  
2. Academic Subject Code: MATH

3. Course Number: M208 (must be cleared with University Enrollment Services)  
4. Instructor: Mathematics faculty

5. Course Title: Technical Calculus I

6. First time this course is to be offered (Semester/Year):  

7. Credit Hours: Fixed at 3 or Variable from ________ to ________

8. Is this course to be graded S-F (only)? Yes [ ] No [X]

9. Is variable title approval being requested? Yes [ ] No [X]

10. Course description (not to exceed 50 words) for Bulletin publication: **P: M115 or M125 and M126**

   An introduction to differential and integral calculus for today's technology students. It covers analytic geometry, limits, derivatives, applications of the derivatives, the integrals, and transcendental functions and technical applications. The approach is semi-rigorous with emphasis on the applications of calculus to technology.

11. Lecture Contact Hours: Fixed at 3 or Variable from ________ to ________

12. Non-Lecture Contact Hours: Fixed at ________ or Variable from ________ to ________

13. Estimated enrollment: 30 of which 0 percent are expected to be graduate students.

14. Frequency of scheduling: **Twice per yr**  
Will this course be required for majors? [No]

15. Justification for new course: Can satisfy calculus requirement for the BS and AS in Computer Science. Also, it can satisfy calculus requirement for the Purdue Technology program students.

16. Are the necessary reading materials currently available in the appropriate library? [Yes]

17. Please append a complete outline of the proposed course, and indicate instructor (if known), textbooks, and other materials.

18. If this course overlaps with existing courses, please explain with which courses it overlaps and whether this overlap is necessary, desirable, or unimportant. No, however, credit will not be given for M208 and M119 or M208 and M215.

19. A copy of every new course proposal must be submitted to departments, schools, or divisions in which there may be overlap of the new course with existing courses or areas of strong concern, with instructions that they send comments directly to the originating Curriculum Committee. Please append a list of departments, schools, or divisions thus consulted.

University Enrollment Services Final—White; Chancellor/Vice-President—Blue; School/Division—Yellow; Department/Division—Pink; University Enrollment Services Advance—White
For some years, Purdue Technology students on our campus have taken M119 and M120 to satisfy their calculus requirements. Since these courses were designed originally to serve business majors and social science students, our department, in consultation with the Purdue Technology faculty, has designed two new courses (M208 & M209) that will better meet those students’ needs. These courses can also be used by computer science majors to fulfill their recently revised calculus requirements.

M208 is an introduction to differential and integral calculus for today’s technology students. It covers analytic geometry, limits, derivatives, applications of the derivatives, the integrals, and transcendental functions and technical applications. The approach is semi-rigorous with emphasis on the applications of calculus to technology.

**Course Prerequisite:** M115 or (M125 and M126)

**CONTENTS**

**Introduction to Analytic Geometry**
- The Cartesian Coordinate System and Distance Formula
- The Slope of a line
- The Equation and Graph of a line
- Curve Sketching [intercepts, symmetry, asymptotes, and extent]

**Limits and derivatives**
- Definition of a Function
- Definition and Computation of Limits
- Definition of the Derivative
- Computing the Derivative from the Definition
- Power Rule
- Instantaneous Rates of Change: Technical Applications
- Product, Quotient, and Generalized Power Rules
- Higher Derivatives

**Application of the Derivatives**
- Equations of the Tangent and Normal Lines to a Curve.
- The First-Derivative Test
- The Second-Derivative Test
- Technical Applications of Minima and Maxima
- Related Rates and Applications
- Differentials and Applications

**The Integral**
- Antiderivatives
- Find the Area under a Curve by using Limits
- The Fundamental Theorem of the Calculus
- Definition of the Definite Integral
- Basic Integration Formulas
- Area Between Curves
- Improper Integral

**Derivatives of Transcendental Functions**
- Derivatives of Trigonometric Functions
- Derivative of the Logarithmic Functions
- Derivative of the Exponential Functions
- Technical applications

**Textbook:** Technical Calculus with Analytic Geometry, Third Edition, by Peter Kuhfittig
