1. Description of grant-supported activity
The grant was used for support project “Agglomeration effects in collaborative clusters: the differential effects of competitor and supplier clusters on innovation.” Lot of time was spent on literature review, collecting, cleaning and analyzing datasets, running estimation analysis, and writing a manuscript. Based on the results from estimation analysis, I had to extend my literature review and make several changes to my theoretical framework. Overall the project shaped as per my expectations.

2. Were you able to complete the project? Describe any difficulty you had.
Yes, I was able to complete the project. The time line for completion of project needed to extend as more time needed to spend on additional literature review. Further, based on the results from estimation analysis, further changes to the theoretical framework were needed. This further extended the deadline for completion of project.

3. Did, or will, the project result in a specific product -- a manuscript, composition, syllabus, etc?
The project resulted in a manuscript which was presented in the MBAA conference on March 26th 2014. Further, this manuscript was also published in the Marketing Management Association, 2014 Annual Spring Conference Proceedings, Chicago, IL. I also plan to build on this project to work further in this area of research.
